

CARE FOR THE POST-SURGICAL WOUND

Steri Strips are like bandages and may have been applied to your surgical wound for additional support after sutures have been removed. These strips should stay intact 7-10 days.

You may shower with Steri Strips intact. If the edges of the Steri Strips begin to curl up you can clip the edges away. After 7 days if the Steri Strips become loosened you can just remove them gently from the skin.

Please call our office if you have any concerns regarding your wound. If the wound becomes red or if you develop a fever greater than 101° please call our office at 402-489-8888.
